PROFILE

Cloud Engineer specializing in **AWS infrastructure, automation, and cost optimization**. Experienced in designing **scalable, high-availability architectures**, managing **cloud migrations**, and implementing **IaC**. Passionate about **performance optimization, security, and seamless deployments**.

EDUCATION

Bachelor of Engineering,B.E. in Information Technology 7.35 CGPA

SKILLS

Cloud & DevOps: AWS (EC2, S3, IAM, Load Balancers, Auto Scaling, Lambda, RDS)
Programming & Web Development: Python, Django, HTML, CSS, JavaScript, React,SQL
Tools & Platforms: Git, Linux,CloudWatch

INTERNSHIP

AWS & DevOps Intern, GenieUs Tech Nov 2024-Feb 2025

- Designed and deployed **AWS 3-tier architectures**, improving application scalability and performance by **60%** while ensuring high availability.
- Provisioned **EC2 (web/app layer), RDS (database layer), and ALB (load balancing)** using Infrastructure as Code (IaC), enhancing deployment efficiency by **40%**.
- Optimized cloud resources with **CloudWatch and Auto Scaling**, reducing operational costs by **30%** while maintaining performance.

PROJECTS

Stay-Desh 🔗 **Live Project:**Stay-Desh Jan 2025

- **Designed and Deployed a Full-Stack Web Application** – Built *Stay-Desh* using **Next.js** with the frontend hosted on **AWS Amplify**, enabling **99.9% uptime**; implemented user authentication via **Amazon Cognito** and secured frontend-backend communication using **API Gateway** and **EC2**, supporting over **1,000 user sessions monthly**.
- **Implemented Scalable and Secure Cloud Infrastructure** – Leveraged **Amazon RDS (PostgreSQL)** to manage over **10,000 records** with automated backups; integrated **Amazon S3** for storing **5,000+ images**, and improved security posture by **40%** through fine-grained **IAM roles** and **VPC configurations**

ETech 🔗 **Live Project:** ETech Oct 2024

- **AWS-Powered Scalable Deployment –** Deployed the platform using Docker containers on **AWS,** improving deployment efficiency by **60%.** Utilized **ECR** for container management, **Lambda** for serverless functions, and **API Gateway** for seamless communication, reducing infrastructure management by **70%.**
- **Optimized Performance and Security –** Implemented **DynamoDB** as a scalable data storage solution, achieving a **50%** enhancement in database performance, which directly supported the rapid growth of application **data handling** capabilities and improved **user experience.**
